Airvac AC Controller

Reliable Technology

Many Airvac AC Controllers have been in operation for 20 years or more, including some since the early days of Airvac in the 1980's. To guarantee optimal performance, periodic service and/or rebuilding is necessary.

While Airvac's new HP Controller has features the AC Controller does not, some prefer continuing to use the AC Controller. For those that do, Airvac's service department continues to repair and rebuild the Airvac AC Controller with the latest updates. In addition, AC Controllers and controller rebuild kits are available for purchase.

Rebuild Kits

Airvac recommends rebuilding your controller every 10 years (under normal conditions). Typical rebuilding time is 30 minutes and involves cleaning all components, replacing the rubber components and air filter, and testing.

Repair Service

Airvac understands that your time is valuable, so we also offer repair service at a reasonable price. If interested, contact Airvac for a Return Material Authorization (RMA) form. Once the controller is received, we will completely rebuild and test the controller so it will be ready for use once it is returned.

Contact the parts & service department directly for detailed pricing at: **1-800-AIRVAC9** - Option #2
