

2-Piece Cold Weather Pit

Airvac's 2-piece cold weather valve pit is a modification of Airvac's standard 2-piece, all PE, valve pit where the cone top includes a double wall with an imbedded layer of insulation and an insulated lid insert under the standard cover. As a further precaution, Airvac recommends not locating valve pits in roads and berms in cold weather climates.

The cold weather valve pit is available in 3 sizes.

Valve Pit	Overall Depth	Depth of Sump	Depth of Pit Cone	Sump Capacity
VP3042CW	6 ft	30 in	42 in	85 gallons
VP5442CW	8 ft	54 in	42 in	158 gallons
VP7842CW	10 ft	78 in	42 in	250 gallons

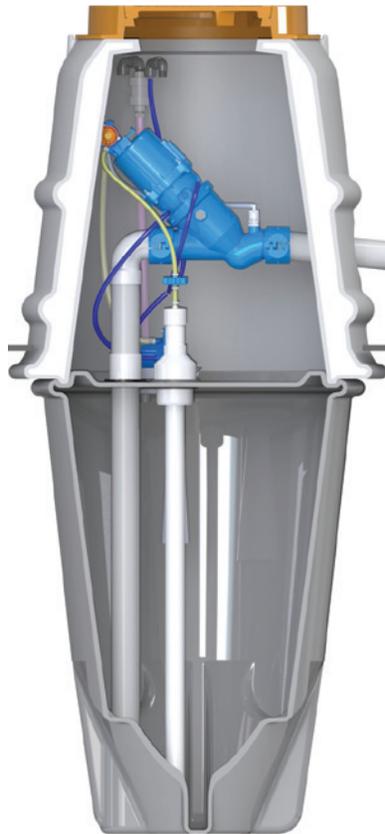

All other pit components (sump/pit bottom, sensor pipe, in-sump breather, suction pipe, anti-buoyancy collar, etc.) are identical to those included with the standard 2-piece valve pit.
